

With the a certian VRS blocking my choice as an free american to choose which provider to use to make my phone calls with, i am forced to increase electrical equipment to make mulitple phone calls a day in a fast paced environment. being a heard of hearing individual, i am now use too many electronics today just to make have a simple conversation with an hearing person just to be productive to the society. We demand to have equal rights just the same as hearing people to make any phone calls along with emergency calls without any waiting. We also need to be able to give hearing people a simple way of contacting us. hearing people are already not willing to make a phone call to the deaf,hoh community and we need to make way for our present and future generation to stay in touch.
